

MINERA DE SANTA MARTA

S O D I U M S U L P H A T E

Raw Material

MINERA DE SANTA MARTA, S. A. is a Spanish leading company in the production and commercialisation of natural anhydrous sodium sulphate since 1989. It is part of the SAMCA industrial and mining Group with a consolidated and widespread presence both at national and international markets, with sales in all continents.

The basic mineral for the production of MSM's anhydrous sodium sulphate is glauberite. Production process performed in MSM is absolutely respectful to the environment and involves state of the art technology resulting in extremely dry products of the highest purity in Na_2SO_4 content, with an absence of alkaline-earth metals and heavy metals. MSM's products have a wide range of average particle sizes ranging from single crystals of $30\ \mu\text{m}$ to $750\ \mu\text{m}$.

Production Process

MSM's sodium sulphate is perfectly suited to different consumer sectors: powder detergency for fabrics with solution and dry-mixing or post-addition processes, powders for dish-washers, glass producers, Kraft pulp and paper industry, textile dyeing processes, industrial colourings, foodstuffs, pharmacy, etc. The quality of the product and all carried out operations were awarded ISO 9001 in 1996 and ISO 14001 in 2001.

MSM is considered one of the best companies world wide in the development of new products, being a pioneer in high coarse products and also including additives in its sodium sulphate.

Distribution

MSM has a wide experience in logistics with intermediate warehouses at European ports, in South America and in the North of Africa, which ensures the shortest possible delivery times. MSM's sodium sulphate is delivered in bulk (either conventional cargo or bulk-container), in big bags ranging from 500 kg up to 2,100 kg or in bags from 20 kg up to 50 kg.
